Total Facility Solutions Continues Expansion with Texas and New York Facilities

Strong Business Growth in Semiconductor, Life Science and Science & Research Markets Drives New Fabrication, Warehouse and Office Locations and Hiring

Plano, TX — January 18, 2011 — As part of the company's ongoing expansion, [Total Facility Solutions, Inc.](#), a specialty contractor and services company focused on critical process infrastructure, today announced it has opened new facilities in Austin, Texas and Fishkill, New York. These add to the company's presence in high technology manufacturing regions, building on the Raleigh, North Carolina facility opened in late 2009 for a total of nine locations across the US. Additionally, the company has added ten senior project managers since the middle of the year to support its growth.

"Total Facility Solutions booked over US \$100 million in new orders in 2010, which gave us annual revenue growth of approximately 50 percent over 2009," said Joe Cestari, president of Total Facility Solutions. "We have made significant investments to our infrastructure and personnel to support our expanding client base. The Austin and Fishkill locations allow us to enhance on-the-ground presence in key regions that will directly support new and existing clients. This additional capacity brings our industry-leading cost, schedule and safety performance closer to our customers."

The Austin location is comprised of a 20,000-square-foot facility with nearly half of that serving as fabrication space. Austin was selected to support new projects in the region with some of the semiconductor industry's largest manufacturers. The Fishkill location adds a 5,000-square-foot facility to Total Facility Solutions' existing regional locations to support customers across a broad range of process-critical industries that include semiconductors, life science and scientific research.

TOTAL FACILITY SOLUTIONS

A Company of the M+W Group

Total Facility Solutions, Inc.

Total Facility Solutions (TFS) provides turnkey facilities contracting services including high-purity piping, gas and chemical systems, ultra-high purity water systems, tool and equipment installation, clean utilities, and electrical services to the semiconductor, electronics, nanotechnology, photovoltaic, life sciences, mission critical, and renewable energy industries. The company is a wholly owned subsidiary under the holding company M+W Americas, a full service architectural, engineering, and construction management firm that offers a broad range of global services to public and private science and research, biotechnology, electronics, advanced technology, manufacturing, and institutional clients.
